📍 Hamburg, GER – as of now

Senior Application Developer (m/f/d) Cloud for climate protection Startup

vilisto
einfach Wohlfühlklima

With our self-learning radiator control for offices, we make climate protection easy. As a Hamburg-based startup founded in 2016, we are advancing the energy revolution in non-residential buildings, with proven savings of up to 32%. Together with you, we want to lay down a steep growth curve and increase our contribution to climate protection by expanding our customer base and further developing our products.

As a Senior Application Developer (f/m/d) you will bring our cloud software to the next level. You are responsible for the enhanced development of the microservices-based cloud platform. You lead a team with which you plan, develop and implement new backend components. Become an important part of a successful, growing start-up company where you can fulfil yourself.

What we offer

- Job with sense and design freedom
- Versatile, varied tasks with responsibility that will challenge you
- Personnel responsibility
- Short decision-making processes
- A highly motivated team
- Flexible working hours with the possibility to work from home
- Fresh fruit, coffee and water

What you do with us

- You develop, plan and implement backend components for our cloud platform
- You empathetically lead your team of currently 2 developers to top performance and high code quality
- In addition to requirements structuring and implementation, you are also responsible for the rollout of your software
- You are responsible for the faultless operation of your components and contribute significantly to finding solutions in case of bugs
- In close cooperation with our data analysts, the DevOps team and project engineers, you will implement the requirements of our customers
- Thanks to our agile software development, you have the opportunity to realize your potential as a Scrum Master, for example

What you bring along

- You have practical experience with NodeJS (Java or TypeScript) and feel at home in backend development
- You have at least 5 years of relevant professional experience and have already gained some leadership experience
- You work in a structured and independent manner
- Thanks to your high level of comprehension, you quickly learn how to use new tools.
- Knowledge of other programming languages is a plus
- Initial experience with microservices, containerization, kubernetes, databases and IoT is helpful
- You are bursting with motivation and are keen to actively promote climate protection in Germany
- You can express yourself flawlessly in written and spoken German or English

Imagine a world in which all people are mindful of their environment and through innovation only consume as much energy as they need for their well-being. That's what vilisto stands for! You do too? Then we look forward to receiving your application (also without cover letter) with your salary expectations and possible starting date. Click on the button now and send us an email to jobs@vilisto.de
